

Reliable and durable cable trays for cable management

Do you want to be sure that the raceways of various power and telecommunication cables shall be durable, robust, non-propagating fire and that they will last for many decades ?

CABLE TRAYS

Solution description

SITEL offers the universal Swedish WIBE Defem® modular system to manage in its projects various types of cables. This modular system allows for unusual installations in addition to standard usage. However, the main objective is to secure both cable lines and separate cables with a number of anchorages in the installed space. To complete the solution, it is complemented by the Combi Rack universal assembly, the same producer, the construction of subsequent technology stands and firewalls, the entrances and exits of rooms and buildings, and HAWKE fireproof cable transitions. Here you will find a comprehensive solutions for outdoor and indoor technological spaces, shafts, cable chambers, substations and double floor areas such as data and telecommunication rooms.

Surface treatment of cable trays:

- galvanized
- hot dip galvanized (EN1461)
- stainless steel

Fire resistance tested:

- 750 ° C for 90 minutes

Dimensions of trays:

- from 53/45 mm (width / height)
- up to 622/110 mm (width / height)
- length of the parts 2,5 m and 3 m

Benefits to customers

We offer our customers full technical support, including proposal, design, installation and after-sales service. We also supply cable trays as a part of the installation of cable raceways in buildings as well as outdoors. We will always represent you as the guarantor of the entire solution and your long-term partner.
